

Wide and narrow channels place downstream bales such that point "B" is approximately level with the lowest ground elevation of the upstream bale.

NOTE:
WATER FLOWS OVER THE CHECKS AND NOT AROUND THE ENDS
POINT A MUST BE HIGHER THAN POINT B TO ENSURE THAT

Overlap side bales on flow-line bale(s) to prevent gaps

Note: Since 1992, the USEPA has NOT recognized bale barriers as an appropriate method to reducing sediment in runoff waters

NOTE:
REFER TO CHAPTER 8 AND 9 OF THE CITY OF LINCOLN DRAINAGE CRITERIA MANUAL FOR MORE INFORMATION ON SEDIMENT AND EROSION CONTROL MEASURES
